

NutriCaP (Nano DCP)

Nano sized DCP from United Nanotech Products Limited

NutriCaP (Nano-DCP)

The nanotechnology based product is a combination of nano and sub-micron size particles; is a source of Calcium and Phosphorus in cattle feed. The smaller particle size of NutriCaP ensures that it has high nutritional effect on the cattle by virtue of better absorption and digestion, resulting in reduced usage levels, increased milk production, fat content and lactating period. Thereby providing overall cost benefit.

NutriCaP is easy to use with 50g for the first 7 days (booster dose), followed by 30g per day mixed with meal.

UNITED NANOTECH PRODUCTS LIMITED

A pioneer and a market leader in India in developing, manufacturing and supplying of nanotechnology derived products.

Focused on providing next generation, nanotechnology based solutions and products, we works closely with our customers world-wide to develop products and solutions that will enable then to outperform their competition and stay ahead of the innovation curve. Our approach therefore is focused on new ways of combining business and technology innovations to develop and deliver nanotechnology based advanced solutions.
