

UN-CalPro

Nano Sized supplements for lactating cattle

Increased milk production

The use of the product results in increased milk production in tune with the optimum capacity of the lactating cattle.

Increased milk fat/solids

The fat content in the milk is also increased with regular use.

Good bone strength

The lactating cattle is also replenished with the vital minerals needed, resulting in maintaining of good bone density/strength.

Dosage:

Recommended

Cows: 100g/ day

Buffaloes: 150g/day

UN-CalPro

The nanotechnology based product is a combination of nano and sub-micron size particles; is a source of Calcium, Phosphorus and other minerals that are essential for lactating cattle. The smaller particle size of UN-CalPro ensures that it is easily and fully absorbed by the cattle, thereby aiding in replenishing the required calcium in lactating cattle. Resulting in increased milk production, better solid content, good health and overall cost benefit to the farm.

UNITED NANOTECH PRODUCTS LIMITED

A pioneer and a market leader in India in developing, manufacturing and supplying of nanotechnology derived products.

As a proven partner focusing on providing next generation, nanotechnology based solutions and products, we work closely with our customers world-wide to develop products and solutions that will enable them to outperform their competition and stay ahead of the innovation curve. Our approach therefore is focused on new ways of combining business and technology innovations to develop and deliver nanotechnology based advanced solutions.

We work closely with customers, ranging from large corporations and new generation technology companies – to design and develop products based on their specific and application oriented needs
